

Through-Beam LASER BARRIER

Laser Barrier

VL/VRG

Detection of hot or cold products

Visible laser beam

Models with alarm signal

Designed for harsh environment

80 m

Lt 962

Special Features

- Intense, highly directive, visible red laser diode beam.
- Insensitivity to ambient light.
- Adjustable sensitivity.
- A LED indicator showing operation of the receiver.
- Air purging.
- Optional water-cooling jackets for use at ambient temperatures higher than 50 °C (122 °F).
- Alarm signal, when the lenses become too dirty or when the internal temperature is too high.
- Modular construction allowing rapid maintenance.
- Optional features allowing configuration for any application.

Typical applications

The **Laser Barrier VL/VRG** resolves all detection problems that may arise in the most diverse types of industry, for example heavy industry (steel), handling and transport, etc. It is particularly recommended for the following applications:

The emitter **VL** unit emits a high intensity, visible beam of modulated red laser light. This beam is received by a photosensitive diode fitted with an optical filter and whose signal is processed by the incorporated circuitry of the receiver **VRG**. The output changes state depending on whether the modulated beam is interrupted or not. Beam modulation, special optical filter and automatic correction make the sensor insensitive for ambient light.

Commissioning and Alignment

The visible, intense and highly directive laser beam makes the setting up of the optical barrier **VL/VRG** simple and rapid.

To align the sensor, use the following procedure:

- Mount the **VL** emitter and adjust its orientation while at the same time observing the point of impact of the beam on the product to be detected.
- Observe the impact of the laser beam on a target near the **VRG** receiver.
- Position the receiver so as to center the beam on its lens.
- Set the receiver sensitivity potentiometer to maximum.
- Turn the receiver about its axis in order to find the extreme positions where the output changes state.
- Fix the receiver in the central position between these two extremes.

This procedure guarantees a precision for the detection of approx. 1 cm for a product of cross-section greater than 4 cm.

The accuracy of the detection can be increased by optimizing the detection threshold adjustment with the sensitivity potentiometer.

Performance specifications

Maximum distance between emitter and receiver	80 m
Detection accuracy	For 2 m product/sensor distance: ± 1.5 mm For 6 m product/sensor distance: ± 5 mm

Emitter

Reference	VL
Emitted power / Laser class	1 mW / Class II (FDA 21 CFR 1040), Class 2 (IEC 60825-1)
Wave length	635 - 670 nm
Divergence	Typ. 1 mrad

Laser Class 2

Lt 962 2

Receiver

Model	VRG - ••• S Transistor Output	VRG - ••• SR • Isolated solid state relay output	VRG - ••• R • Relay Output
Electrical characteristics	2 complementary push-pull outputs, short circuit protection, Low impedance : 0/24 V - 100 mA max.	2 Optocoupled complementary Solid State Relay : Impedance : 50 Ω Switching capacity +/- 350 V peak +/- 100 mA peak	Single pole changeover Switching capacity : 230 V a.c. – 2.5 A a.c.
Response time	1 ms		Make time : 8 ms Break time : 4 ms
Alarm	Push-pull output, short circuit protection, 0/24 V - 50 mA max (not available for VRG - • C - R and VRG - • C - SR with AC supply voltage) 0V if received light too low or internal temperature > 50 °C		

Model	VRG - ••• S	VRG - ••• R1 – VRG - ••• SR1	VRG - ••• R2 – VRG - ••• SR2
Operating mode	S output at 24 VDC and LED on when the beam is interrupted.	Dark: relay energized and LED on when the beam is interrupted.	Light: relay energized and LED on when the beam is not interrupted.
LED indicator	Off: Beam not interrupted Green: Beam interrupted Red: Alarm, beam not interrupted Orange: Alarm, beam interrupted	Off: Beam not interrupted Green: Beam interrupted Red: Alarm, beam not interrupted Orange: Alarm, beam interrupted	Off: Beam interrupted Green: Beam not interrupted Red: Alarm, beam interrupted Orange: Alarm, beam not interrupted

Other data and dimensions:

Operating voltage	220 V (-15%) to 240 V (+10%) - 50 / 60 Hz or 110 V (-15%) to 120 V (+10%) - 50 / 60 Hz or 24 V (±10%) - 50 / 60 Hz	24 V DC (±20%)
Power consumption	10 VA	8 W
Connection	Terminal block – 2 PG 9 (VL/VRG - •• B - •••) Connector fitted with silicone cable with protective steel braid (VL/VRG - •• C - •••) Standard length of 2 m (other length: 3, 5 or 8 m)	
Weight	5 kg (VL/VRG - JC - ••) – 3.6 kg (VL/VRG - LB - ••)	
Protection rating	IP 67 (cast aluminium case)	
Air purging	Protection of the optic with clean air : 50 to 200 g/cm ² , 4 to 16 l/min	
Working temperature	-10 to 50 °C (14 to 122 °F) without cooling Up to 120 °C (250 °F) with water cooling: industrial quality water at about 25 °C (77 °F), pressure 1-2 bar and flow 1-2 l/min
